Summary of TLA

Module-Level Constructs

The Constant Operators

Miscellaneous Constructs

Action Operators

Temporal Operators

User-Definable Operator Symbols

Precedence Ranges of Operators

Operators Defined in Standard Modules.

ASCII Representation of Typeset Symbols

MODULE M

Begins the module or submodule named M .

EXTENDS M_1, \dots, M_n

Incorporates the declarations, definitions, assumptions, and theorems from the modules named M_1, \dots, M_n into the current module.

CONSTANTS C_1, \dots, C_n ⁽¹⁾

Declares the C_j to be constant parameters (rigid variables). Each C_j is either an identifier or has the form $C(-, \dots, -)$, the latter form indicating that C is an operator with the indicated number of arguments.

VARIABLES x_1, \dots, x_n ⁽¹⁾

Declares the x_j to be variables (parameters that are flexible variables).

ASSUME P

Asserts P as an assumption.

$F(x_1, \dots, x_n) \triangleq \text{exp}$

Defines F to be the operator such that $F(e_1, \dots, e_n)$ equals exp with each identifier x_k replaced by e_k . (For $n = 0$, it is written $F \triangleq \text{exp}$.)

$f[x \in S] \triangleq \text{exp}$ ⁽²⁾

Defines f to be the function with domain S such that $f[x] = \text{exp}$ for all x in S . (The symbol f may occur in exp , allowing a recursive definition.)

(1) The terminal s in the keyword is optional.

(2) $x \in S$ may be replaced by a comma-separated list of items $v \in S$, where v is either a comma-separated list or a tuple of identifiers.

INSTANCE M WITH $p_1 \leftarrow e_1, \dots, p_m \leftarrow e_m$

For each defined operator F of module M , this defines F to be the operator whose definition is obtained from the definition of F in M by replacing each declared constant or variable p_j of M with e_j . (If $m = 0$, the WITH is omitted.)

$N(x_1, \dots, x_n) = \text{INSTANCE } M \text{ WITH } p_1 \leftarrow e_1, \dots, p_m \leftarrow e_m$

For each defined operator F of module M , this defines $N(d_1, \dots, d_n)!F$ to be the operator whose definition is obtained from the definition of F by replacing each declared constant or variable p_j of M with e_j , and then replacing each identifier x_k with d_k . (If $m = 0$, the WITH is omitted.)

THEOREM P

Asserts that P can be proved from the definitions and assumptions of the current module.

LOCAL def

Makes the definition(s) of def (which may be a definition or an INSTANCE statement) local to the current module, thereby not obtained when extending or instantiating the module.

Ends the current module or submodule.

The Constant Operators

Logic

$\wedge \vee \neg \Rightarrow \equiv$
TRUE FALSE BOOLEAN [the set {TRUE, FALSE}]
 $\forall x \in S : p^{(1)} \quad \exists x \in S : p^{(1)}$
CHOOSE $x \in S : p$ [An x in S satisfying p]

Sets

$= \neq \in \notin \cup \cap \subseteq \setminus$ [set difference]
 $\{e_1, \dots, e_n\}$ [Set consisting of elements e_i]
 $\{x \in S : p\}^{(2)}$ [Set of elements x in S satisfying p]
 $\{e : x \in S\}^{(1)}$ [Set of elements e such that x in S]
SUBSET S [Set of subsets of S]
UNION S [Union of all elements of S]

Functions

$f[e]$ [Function application]
DOMAIN f [Domain of function f]
 $[x \in S \mapsto e]^{(1)}$ [Function f such that $f[x] = e$ for $x \in S$]
 $[S \rightarrow T]$ [Set of functions f with $f[x] \in T$ for $x \in S$]
 $[f \text{ EXCEPT } ![e_1] = e_2]^{(3)}$ [Function \hat{f} equal to f except $\hat{f}[e_1] = e_2$]

Records

$e.h$ [The h -field of record e]
 $[h_1 \mapsto e_1, \dots, h_n \mapsto e_n]$ [The record whose h_i field is e_i]
 $[h_1 : S_1, \dots, h_n : S_n]$ [Set of all records with h_i field in S_i]
 $[r \text{ EXCEPT } !.h = e]^{(3)}$ [Record \hat{r} equal to r except $\hat{r}.h = e$]

Tuples

$e[i]$ [The i^{th} component of tuple e]
 $\langle e_1, \dots, e_n \rangle$ [The n -tuple whose i^{th} component is e_i]
 $S_1 \times \dots \times S_n$ [The set of all n -tuples with i^{th} component in S_i]

-
- (1) $x \in S$ may be replaced by a comma-separated list of items $v \in S$, where v is either a comma-separated list or a tuple of identifiers.
 - (2) x may be an identifier or tuple of identifiers.
 - (3) $![e_1]$ or $!.h$ may be replaced by a comma separated list of items $!a_1 \cdots a_n$, where each a_i is $[e_i]$ or $.h_i$.

Miscellaneous Constructs

IF p THEN e_1 ELSE e_2	$[e_1 \text{ if } p \text{ true, else } e_2]$
CASE $p_1 \rightarrow e_1 \square \dots \square p_n \rightarrow e_n$	$[\text{Some } e_i \text{ such that } p_i \text{ true}]$
CASE $p_1 \rightarrow e_1 \square \dots \square p_n \rightarrow e_n \square \text{OTHER} \rightarrow e$	$[\text{Some } e_i \text{ such that } p_i \text{ true, or } e \text{ if all } p_i \text{ are false}]$
LET $d_1 \triangleq e_1 \dots d_n \triangleq e_n$ IN e	$[e \text{ in the context of the definitions}]$
$\wedge p_1$	$[\text{the conjunction } p_1 \wedge \dots \wedge p_n]$
$\vee p_1$	$[\text{the disjunction } p_1 \vee \dots \vee p_n]$
\vdots	\vdots
$\wedge p_n$	$\vee p_n$

Action Operators

e'	$[\text{The value of } e \text{ in the final state of a step}]$
$[A]_e$	$[A \vee (e' = e)]$
$\langle A \rangle_e$	$[A \wedge (e' \neq e)]$
ENABLED A	$[\text{An } A \text{ step is possible}]$
UNCHANGED e	$[e' = e]$
$A \cdot B$	$[\text{Composition of actions}]$

Temporal Operators

$\square F$	$[F \text{ is always true}]$
$\diamond F$	$[F \text{ is eventually true}]$
$\text{WF}_e(A)$	$[\text{Weak fairness for action } A]$
$\text{SF}_e(A)$	$[\text{Strong fairness for action } A]$
$F \rightsquigarrow G$	$[F \text{ leads to } G]$

Infix Operators

$+^{(1)}$	$-^{(1)}$	$*^{(1)}$	$/^{(2)}$	$\circ^{(3)}$	$++$
$\div^{(1)}$	$\%_0^{(1)}$	$\wedge^{(1,4)}$	$\dots^{(1)}$	\dots	$--$
$\oplus^{(5)}$	$\ominus^{(5)}$	\otimes	\oslash	\odot	$**$
$<^{(1)}$	$>^{(1)}$	$\leq^{(1)}$	$\geq^{(1)}$	\sqcap	$//$
\lrcorner	\rceil	\lceil	\rceil	\sqcup	$\hat{\hat{}}$
\ll	\gg	$<:^{(6)}$	$:>^{(6)}$	$\&$	$\&\&$
\sqcap	\sqcup	$\sqsubseteq^{(5)}$	\sqsupseteq	$ $	$\%\%$
\subset	\supset		\supset	\star	$@@^{(6)}$
\top	\bot	\models	\models	\bullet	$\#\#$
\sim	\simeq	\approx	\cong	$\$$	$\$\$$
\bigcirc	$::=$	\times	\doteq	$??$	$!!$
\propto	$\}$	\notin			

Postfix Operators ⁽⁷⁾

$\wedge+$ $\wedge*$ $\wedge\#$

- (1) Defined by the *Naturals*, *Integers*, and *Reals* modules.

(2) Defined by the *Reals* module.

(3) Defined by the *Sequences* module.

(4) $x\wedge y$ is printed as x^y .

(5) Defined by the *Bags* module.

(6) Defined by the *TLC* module.

(7) $e\wedge+$ is printed as e^+ , and similarly for $\wedge*$ and $\wedge\#$.

The relative precedence of two operators is unspecified if their ranges overlap.
Left-associative operators are indicated by (a).

Prefix Operators
